

Boost your performance.

Make your systems more productive with JAG OEE.

OEE is more than just a number; it's an indicator of a manufacturing company's future prospects. Find out more about the specific advantages and opportunities offered by JAG OEE.

Overall Equipment Effectiveness (OEE).

Availability, performance and product quality at a glance.

It is an open secret that many manufacturing companies can barely reach an OEE of 60%. The good news is that there is still room for improvement – and a consistent OEE strategy is half the battle. JAG OEE allows you to collect the data required to make the right decisions. Our paperless solution, which does not use Excel, can be used to easily determine, visualise and evaluate OEE and other KPIs. JAG OEE uncovers the causes of errors and poor performance while documenting the success

of your measures to optimise the three OEE factors: **Availability.** Increase system availability by reducing downtimes and outages.

Performance. Improve productivity and minimise recurring downtimes. Receive automatic notifications about the failure rate and other statistical evaluations (MTBF, etc.).

Quality. Ensure that products meet the defined quality standards from the beginning.

Specific advantages of JAG OEE

Our locally installed solution provides all OEE-relevant data and additional functions in a single intuitive operating chart.

- » Convenient cockpit functions, including data history search
- » Customisable visualisation for factory applications, production management, etc.
- » Immediate availability on your company's intranet
- » Automatic breakdown detection
